PRACTICAL LAB: JAVASCRIPT OPERATORS MASTERY

Course: DFK20013 Web Design Technology

Topic: 3.1.1 Variables, Data Types, and Operators

Duration: 60 – 90 Minutes

Student Name	**PUTERI ALIA SYAFIA BINTI WANBASRY**
Registration No	**10DIT25F1018**
Date	**2/3/2026**

---

1. Learning Outcomes

By the end of this lab, students should be able to:

- Implement **Arithmetic Operators** for calculations.
- Use **Assignment Operators** to update values efficiently.
- Control application states using **Increment/Decrement**.
- Validate user access using **Relational** and **Logical** operators.

---

2. Practical Task: The All-in-One Operator Workshop

Create a file named lab_operators.html. Copy and complete the coding below.

HTML

```

        <div id="noteSecurity" class="short-note"></div>

    </section>
```

Inside the <script> tag, type all the following code:

JAVASCRIPT:

1.

```
<script>
    // Helper to show explanations
    function showNote(id, text) {
        const noteDiv = document.getElementById(id);
        noteDiv.style.display = 'block';
        noteDiv.innerHTML = text;
    }
```

2.

```
// --- TASK 1: ARITHMETIC (BASIC) ---
function runTask1() {
    console.log("--- Task 1: Arithmetic Operations ---");
    let students = 31;
    students = students + 1;   // Addition
    students = students - 2;   // Subtraction
    students = students * 2;   // Multiplication
    students = students / 2;   // Division
    let power = 10 ** 2;       // Exponentiation (100)
    let remainder = 31 % 2;    // Modulus (1 - Odd)

    console.log("Final Student Count: " + students);
    console.log("10 to the power of 2: " + power);
    console.log("Remainder of 31/2: " + remainder);
    alert("Check Browser Console (F12) for results!");
}
```

3.

```
// --- TASK 2: POS SYSTEM (ARITHMETIC & ASSIGNMENT) ---
function runTask2() {
    let price = 50;
    let qty = parseInt(document.getElementById('qty').value);

    // a. Arithmetic Operator (*)
    let total = price * qty;
    let note = "<b>Subtopic (a) Arithmetic:</b> <code>*</
    code> multiplied " + price + " by " + qty + ".<br>";

    // b. Assignment Operator (-=)
    if (qty > 4) {
        total -= 20; // Shorthand for total = total - 20
        note += "<b>Subtopic (b) Assignment:</b> <code>-=</
        code> updated the total by subtracting the discount.";
    }

    document.getElementById('outPOS').textContent = "Final
    Total: RM " + total.toFixed(2);
    showNote('notePOS', note);
}
```

4.

```
// --- TASK 3: INCREMENT & DECREMENT ---
let stock = 10;
function runTask3(type) {
    let note = "";
    if (type === 'inc') {
        stock++; // (c) Increment
        note = "<b>Subtopic (c) Increment:</b> <code>++</
        code> increased the stock by 1.";
    } else {
        stock--; // (c) Decrement
        note = "<b>Subtopic (c) Decrement:</b> <code>--</
        code> decreased the stock by 1.";
    }
    document.getElementById('stockVal').textContent = stock;
    showNote('noteStock', note);
}
```

5.

```
    // --- TASK 4: RELATIONAL & LOGICAL ---
    function runTask4() {
        let age = parseInt(document.getElementById('age').value);
        let hasParent = document.getElementById('parent').checked;
        let status = document.getElementById('outSecurity');

        if (isNaN(age)) return alert("Please enter a valid age.");

        // d. Relational: >=
        // e. Logical: || (OR), && (AND)
        let isEligible = (age >= 18) || (age >= 13 && hasParent);

        status.textContent = isEligible ? "Status: ACCESS GRANTED
        ✅" : "Status: ACCESS DENIED ❌";
        status.style.color = isEligible ? "#27ae60" : "#ff4d4d";

        let note = "<b>Subtopic (d) Relational:</b> <code>>=</
        code> compared Age (" + age + ") to the limit.<br>";
        note += "<b>Subtopic (e) Logical:</b> Used <code>||</
        code> (OR) and <code>&&</code> (AND) to combine rules.";
        showNote('noteSecurity', note);
    }
</script>
```

Capture a screenshot of the output from the previous steps. **Observe** the results and **explain** your understanding of the process.

1.	**Screenshot of the output** `--- Task 1: Arithmetic Operations ---` index.html:140 `Final Student Count: 30` index.html:150 `10 to the power of 2: 100` index.html:151 `Remainder of 31/2: 1` index.html:152
	Explanation **This program performs basic arithmetic operations in JavaScript.** **The variable student starts with the value 31. After addition, subtraction, multiplication, and division, the final value becomes 30.** **The program also calculates:** **10 ** 2, which equals 100 (exponent operation).** **31 % 2, which gives 1 (remainder after division).** **All results are displayed in the browser console using console.log().**

2.	**Screenshot of the output** **Task 1: Basic Arithmetic (Check Console)** This task demonstrates background calculations using `+`, `-`, `*`, `/`, `**`, and `%`. Run Console Logic
	Explanation **It means the task will perform basic math operations in the background using:** • **+ (addition)** • **- (subtraction)** • *** (multiplication)** • **/ (division)** • **** (power)** • **% (modulus/remainder)**

3.	**Screenshot of the output**
	Explanation **This POS system calculates the total price based on quantity entered.** **Each item costs **RM50**. If the customer buys more than 4 units, they receive a **RM20 discount**.** **The system multiplies the price by the quantity and subtracts the discount (if eligible), then displays the final total amount.**

4.	**Screenshot of the output** **Task 3: Stock Control (Increment & Decrement)** Simulating inventory updates. Stock Level: **11** Add (+) Remove (-) **Subtopic (c) Increment:** ++ decreased the stock by 1.
	Explanation **This task shows how ++ (increment) and -- (decrement) work.** • **Clicking Add (+) increases the stock number.** • **Clicking Remove (-) decreases the stock number.** **It simulates updating inventory.**

5.	**Screenshot of the output**
	Explanation **This task uses comparison and logical operators.** **Rule: Entry allowed if Age ≥ 18 OR (Age ≥ 13 AND with parent).** **It checks the conditions and shows either Access Granted or Access Denied.**

3. Quick Check (Reflection)

Instruction: Answer the following questions based on your coding results.

1. **Modulus Utility:** Based on Task 1, if students % 2 returns 0, is the number even or odd?
2. **Shorthand Power:** In Task 2, rewrite total -= 20 using the standard assignment method.
3. **Logical Priority:** In Task 4, why did we put (age >= 13 && hasParent) in parentheses?
4. **Time Calculation:** (Extra Challenge) If a variable totalMinutes = 130, write the formula to find the remaining minutes after converting to hours using the **Modulus** operator.
